

### UV-resistant glue

For the glue boards in fly traps, the UV resistance of the adhesive and backing is crucial. The glue board is key to ensuring that insects cannot escape from the trap, and it also needs to be sturdy and not deform, to avoid difficulties in operations. Our glue boards have been proven to fully meet these requirements.

## Various off-the-shelf & OEM boards/rolls

Glue:	Well-known brand made in Europe or selected local brand
Backing:	Cardboard / PVC board
Working temperature:	0~70 °C
Multi-layer board:	3 layers boards
